Office Action Summary

Art Unit: 3634

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 2, and 4-17 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Zhang et al. Zhang et al disclose an object detection system and the method for detection for a vehicle comprising an emitter having a pulse/ultrasonic signal mounted to a vehicle window frame, a receiver mounted to a vehicle window frame, and a controller for mapping a detection area.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zhang et al in view of Trett et al. All of the elements are discussed above except providing the emitter of Zhang et al to be an electromagnetic signal. Trett et al discloses a detection system comprising emitters having an electromagnetic signal. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the emitter of Zhang et al to send an electromagnetic signal as taught by Trett et al since an electromagnetic signal is a faster and more sensitive signal.

Art Unit: 3634

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patent to Zwebner discloses an electromagnetic sensor. U.S. patents to Gionet et al., and Morrow et al disclose elements similar to that of the applicants invention.
